Target version:	
Description	
Moved from github:	
I've had a few requests for this.	
I've had a look at some MHEG5 decoders and its a bit of a behemoth, lots of data that needs to be peeled away to get at the useful stuff (in this case the EPG data).	
So not sure at the moment. Need to work my way through the spec and see if I can a) find the time and b) figure it out.

You guys are developing TVHeadend really nicely, Is there soemthing I can do to help this a long as in NZ the only way to get EPG is with a python script but as things change it keeps breaking. Having MHEG5 support would be awesome for us down here.
