Description			
Maybe not high priority but the streaming capabilities of the WebUI seem quite outdated now not supporting recent VLC mozilla plugins. It would be great to get some sort of native HTTP streaming integrated so it does not rely on third party software. This could also take advantage of transcoding when integrated so we can use ffmpeg to convert the stream on the fly to an appropriate format.

- Priority changed from Normal to Low

It has already been discussed, but we're really waiting on finding someone with the relevant skills to update our UI framework to a newer version which should make this fairly easy to add.

Adam
