

Tvheadend - Bug #1284

Http streaming does not seems to work

2012-09-30 13:41 - Eric Valette

Status: Invalid	Start date: 2012-09-30

Category: Streaming	Estimated time: 0.00 hour
Target version:	Affected Versions:
Found in version: 3.3.7.gbe6c0	

Description

Although I use pseudo local tunners via dvbhdhomerun to not polute my working config, vlc using vlc.xspf file produced by w_scnn works well and thus the streaming works well in vlc to this macines. When using tvheadend maping the hdhomerun tunners, I hardly get something watchable and get a lot of access errors.

vlc <http://localhost:9981/playlist/channelid/1>
VLC media player 2.0.3 Twoflower (revision 2.0.2-93-g77aa89e)
[0x605108] main libvlc: Lancement de vlc avec l'interface par défaut. Utilisez « cvlc » pour démarrer VLC sans interface.
[0xaba308] main access error: connection failed: No route to host
[0xaba308] access_http access error: cannot connect to 192.168.8.18 3128:80
[0xaba308] access_mms access error: invalid chunk FATAL (0x4523)
[0xaba308] access_mms access error: header size 0
[0x6ddb58] main input error: open of `http://localhost:9981/playlist/channelid/1' failed

I'm struggling to see how this is a tvh bug? Your showing vlc debug traces suggesting a vlc problem.

Plenty of people are using http streaming just fine to vlc, including me.

Plenty of people are using http streaming just fine to vlc, including me.

Adam

Streaming in vlc from internet, from ip tv stream outside of tvheadend works fine. It also works fine using pseudo hdhomerun tuner locally.

Well well, I did setup a filtering proxy on another machine for my kind (parental control) and configured konqueror to test it. While updating what I though was the konqueror only proxy settings, it updated the global kde config and vlc did use it!

This bug can be closed. Sorry for the trouble.
