Target version:			
Description			
As above, can the date be included in the "Start" column of the EPG like it appears in the Recorder Schedule. If you have an epg which is over 7 days and search a program to record, you are unsure what date it is on until you click on record program and then look at the recorder schedule.

- Target version set to 3.4

This is a fair point. I'm not entirely sure what the display format should be, simply date+time, or date only if after 7 days etc.. (else current). I'll give it some thought, either way its a trivial mod.

It should also be noted that the column width for Start may need adjusting because it chops off the time for me even in the current layout. Please keep the date format as short as possible - e.g. Wed 30 Sep would be much preferred to Wednesday 30 September. Oh and don't forget to pick up the date format (e.g. DD MMM vs. MMM DD) from the machine's locale.

On my branch webui, I chose to split the start date into two columns, one for "day" and the other for "time", and I tried to keep date length short, but I left format locked. smile.png
