Target version:			
Description			
Is it possible to add a sortable column for providers in the channel setup? This make it much easier to remove channels from unwanted providers blockwise even if the channellist have a lot of entries.

Nobody else?

There are especially on Astra a lot of Transponders/Frequencies that are mixed up with several providers on same mux that have to be sorted by provider. It could be useful (ok that is a administrative task) to remove providers blockwise (e.g. for germans here CANAL+, POLSAT, crypted foreigners etc.) so that the needed services grow down from > 1500 to the real needed. But this need a sortable Column within the channel list. Would be very usefull. The current task is to pick up every channel (e.g. Fox) and verify is it: German, Spain, Polska, Netherland or someone else?
