<b>Found in version:</b>	3.3.465~g79c134f		
<b>Description</b>			
<p>I have problems playing streams directly in the browser. I've tested on three different platforms with different browsers. Here's what I see:</p> <p>I get the following dialog pop-up when clicking the play button (from the tvheadend EP-guide) using Google Chrome on my 64-bit Fedora-17 system:</p> <pre>The following plugin is required text/html decoder Do you want to search for this now?</pre> <p>A subsequent search always fail. The VLC player then shows up with an empty screen.</p> <p>Using Firefox on the same system just renders the VLC player empty screen. There is no preceding dialog.</p> <p>If I start the VLC player from a terminal window and then feed it the URL manually, i.e.:</p> <pre>http://hts:9981/stream/channelid/4</pre> <p>then the stream plays OK.</p> <p>I also tested my Windows-XP system. Firefox doesn't work (same symptom as on Fedora). With IE nothing at all happens, but with Google Chrome, the VLC is started and the stream plays OK.</p> <p>The tvheadend back-end was built from Git master on a 64-bit on a Fedora Core 18 system.</p>
