Description			
ITV-HD doesn't work. It is because tvheadend detects just audio PID, but video PID is not detected.			
Here are transponder and satellite details: http://en.kingofsat.net/tp.php?tp=732			
I also attached muxdump

Hi,

ITV HD on transponder 10832H 22000 5/6 works ok.

The channel you are checking is probably the test channel they were using.

Yes I know that there is another one. But reception of Astra 2D 28.2E is not very good in Slovenia. I can get a good signal on Astra 2B 28.2E and Eurobird 1 28.5E which both have ITV HD, but one is encrypted and other is not working with tvheadend.
