

Tvheadend - Feature #2158

Remove dependency between usage of API and the streaming access privilege

2014-07-01 10:57 - Stefan Mackovik

Description			
I'm using the android tvhclient app.			
I hoped I could use it with a user with only "Video recorder" rights - the purpose is to just be able to add a timer but not to be able to stream over the internet, but just within the local LAN- but it seems that the API is only accessible for an app, if the user has streaming rights...			
Maybe there should be a special "api access right" instead?
