

Tvheadend - Bug #2695

3.4: System crash on Raspberry Pi 2

2015-02-25 19:29 - Stefan Schreffler

Status:	New	Start date:	2015-02-25
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Crashes	Estimated time:	0.00 hour
Target version:		Affected Versions:	
Found in version:	3.4~wheezy		
Description			
<p>After installing the latest version from the repository, my Raspberry Pi 2 will crash any time the tvheadend service is running. Once I restart and I check the syslog, the last thing printed to the log before the crash is ALWAYS "tvheadend2338: epgrab: module xmltv created" (with a different pid of course). I'm not able to find anything on this in the forums, and I'm starting to think it's an issue with running it on the new Raspberry Pi 2, especially since this user is having a similar problem: https://tvheadend.org/boards/5/topics/15426?r=15446. Let me know any other information you might need from me (sorry, super noob). I really appreciate the help.</p>
