

Tvheadend - Bug #2894

Records view is displayed as flatten list in Kodi

2015-05-25 22:27 - Sebastian K.

Status:	Fixed	Start date:	2015-05-21
Priority:	Normal	Due date:	
Assignee:	Adam Sutton	% Done:	100%
Category:	PVR / DVR	Estimated time:	0.00 hour
Target version:		Affected Versions:	
Found in version:	4.1.13~g3a36e86-dirty		
Description			
Prior to commit 3a36e86 (https://github.com/tvheadend/tvheadend/commit/3a36e86b164fae4171027003587ea44797e6bf99) records would be shown as hierarchical folder structure in Kodi. Since that it's just a plain List.			
May be a feature not a bug?			
Bug #2867 (https://tvheadend.org/issues/2867) described the same...			
Subtasks:			
Bug # 2867: recording->d.v.r. profiles-> filename options have become directory options			Invalid

History

TVH should serve same information. It appears like an issue in the kodi plugin.

With same plugin, this appears to still happen with newest compiles. I'm now running 4.1-117~gf27ac40

#3 - 2015-06-01 14:30 - Rob Rob

Also seeing this in 4.1-117.

This is not a plugin issue - plugin has remained a constant before and after these bugs appeared.

1. upgraded from 3.9.xxx to 4.1.18, prior to this recordings working fine and on a directory/per day appearing basis in both client and server side. After this, recordings appeared "flat" in Kodi but recordings still being done in correct directory on server side. Recordings would not play/start, no response to play button.
2. Recent bugfix corrected recordings so they would play, this corrected the issue for new recordings so they will play and record correctly - but a new bug emerged, the recordings are now being located in the root of the specified recording directory and "make new directories" is non funtional in the tvheadend webgui.

Effectively at this point. 4.1.117...

Old recordings - that is ones that are in a directory created on the per day rule - do not play.

New recordings - work and play fine but don't obey "create directories" rule

Recordings are "flat" in Kodi

pvr.hts plugin 2.1.8.

It looks like this is all related to the new

"full pathname specification" field in the "Recording" tab.

This new entry is not migrating over the checkboxes that are ticked, it's also not updating correctly when new boxes are ticked for "create directories per day" under certain circumstances.

This can be worked around easily enough by clearing the new "full pathname specification" field then selecting deselected checkbox setting, reload and then correct format will be displayed...

%F/\$t\$n.\$x

Prior to this only "\$t\$n.\$x" was available...even with "%F/" checked.

Sorry for rambling...hope that's clear.

The wrong pathname for old configs should be fixed in v4.1-126-g145ca52 . Thanks.

Thanks.

Just updated to v4.1-126

Deleted all previous recordings physical and in gui, set recording rules.

Recordings now in correct directories but still in Kodi appear in flattened view - not days etc.

So a bug is still there, the recordings do play though.

This makes it look like it's the addon at fault, but how can that be so when it was working fine and repeatably working fine prior to 4.1.18.

Anyway that's all I can say :)

Thanks for looking into it.
