Description

Hello,

This is in France (Chartres).
The scan shows 6 muxes but only one has services available.
The other ones have none.
No channels are available.
Can something be done?

Thanks

I'm sorry I forgot to mention that it was DVB-T (TNT)

Thanks a lot.

Eric

Hi all,

Actually the problem is solved.
The issue was that HTS could not scan on the right Muxes frequences (new ones) and so it keeped trying on none affected frequences and obvisouly could not find any services.
I used w_sacn in order to try everything and it gave me a channels.conf in which new frequences appeared.
Manually entered in the GUI and it worked immediatly and found all services.

Bye

Can someone tell me how to change the status on this ticket.
It should be tagged as solved.

Thanks

Eric
