

Tvheadend - Feature #3113

Sort services by update time (was: Update mapped channels when changes occur to the linked service.)

2015-09-26 13:33 - Mark Clarkstone

Status:	New	Start date:	2015-12-16
Priority:	Normal	Due date:	
Assignee:		% Done:	100%
Category:	Service Mapping	Estimated time:	0.00 hour
Target version:	4.4		
Description			
<p>I currently don't use bouquets (mainly because they include a load of crap no one usually watches) & so have to manually update mapped channels when service changes occur.</p> <p>It would be nice to have a feature where Tvheadend is able to automatically update the channels when a linked service changes or if that's not possible (I'm thinking it might be difficult) a grid listing changes that may affect mapped services only.</p> <p>For example say if I have a channel called BBC 2 mapped & the linked service changes transponder from 11484V to 12054H Tvheadend then adds this new service to a list/grid somewhere in the webui. This would only get added to this list because we've mapped a service with the same name to a channel.</p> <p>Or quite simply make it easier to view recent service changes.</p> <p>Hopefully that makes sense (I'm running on 3 hours sleep).</p>			
Subtasks:			
Feature # 3421: Services cleanup			Rejected

History

This is a bit undoable. The broadcaster usually changes all IDs when moving to another mux. So the linking should be specified by user. I'm afraid.

But - good thing is that your request for "new services" is already implemented. Just enable "Created" or "Last seen" columns using the grid's header and bingo - you can sort services using these dates. Perhaps, this functionality might be duplicated with a new button in the tool bar (save, undo....).

Yeah I figured as much!

That would be awesome, that would make it so much easier especially on Astra28E where they usually make a load of changes all in one go :/.

#4 - 2015-10-19 00:41 - Jaroslav Kysela

- Target version set to 4.4

#5 - 2015-10-19 00:42 - Jaroslav Kysela

- Subject changed from Update mapped channels when changes occur to the linked service. to Sort services by update time (was: Update mapped channels when changes occur to the linked service.)
