Description

I was starting to sort my channels out (after a transmitter change) and had an idea, Multiple channel lists!
The Channels / EPG can take a while to configure especially when service changes occur & multiple channel lists would really help here.

For example you could keep one channel list live to your users while working on another and then switch them when you've finished making your changes.

I've (badly) made a little mock up.

Opinions?

Good idea from a "managment-standpoint", would really make it easier to do "work" (hey, i'll have to call it something wink.png) on a testing list while users are on the active one's.

But, even not as sleek, you can already do something to the same effect with the tags (add a testing tag and exclude it from the normal users, or lock the normal users to a general tag)...

Yes, tags were added for this purpose. But yes, it might be handy to have a quick filter for one tag in the upper toolbar.

#3 - 2015-10-05 14:38 - Jaroslav Kysela

- Subject changed from *Multiple channel lists* to *Quick channel filter for one tag (was: Multiple channel lists)*

#4 - 2015-10-11 19:55 - Jaroslav Kysela

- Target version set to 4.4
