

Tvheadend - Bug #3230

Webif | EPG | Data swap column

2015-10-30 18:13 - Raymond Paulsen

Status:	New	Start date:	2015-10-30
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	User Interface	Estimated time:	0.00 hour
Target version:		Affected Versions:	
Found in version:	HTS Tvheadend 4.1-776~gd3e541d		
Description			
It seems the webif for epg data is showing wrong data for a column.			
Subtitle field is show episode data as show on the attached image.			
tvh.jpg			

History

#1 - 2015-10-30 18:17 - Raymond Paulsen

EPG source is dvb-s2 OTA, using EIT grabber and viasat baltic only.

#2 - 2015-10-30 18:28 - Jaroslav Kysela

It depends what is broadcasted :-). At the moment TVH does not extract episode info from EPG strings only from XMLTV/PyEPG grabbers (and opentv using regex).

#3 - 2015-10-30 18:38 - Raymond Paulsen

i see, i have used the internal grabber earleir with tvh, xmltv norway beta with the modified url.
it might be that this epg data is origination from internal xmltv, anyway there seems to be some mismatch with the datasets

#4 - 2015-10-30 19:07 - Raymond Paulsen

- File tvh2.jpg added

Ok i have tested a little, stoping tvh and removing the epgdb file manually.
started tvh again and epg was empty, but quickly filling from OTA EIT grabber and viasat baltic ota grabber

look at attached image, episode and subtitle data is mixing.

#5 - 2015-10-31 22:12 - Jaroslav Kysela

Sure. That's what broadcaster provides. The DVB standard does not define episode/series info, so providers stores them to strings which may be parsed with a heuristic method.
