

Tvheadend - Feature #3323

Add/Subtract priority for services

2015-11-19 07:54 - Nina Kampusch

Category:	Service Mapping	Estimated time:	0.00 hour
Target version:			
Description			
Could you add a way to assign a +/- value to services? tvheadend tags new channels with HD, SD etc, with i.e. a "+1" on all HD channels, we could put them in the same "channel" and it would automatically fallback to SD if HD is not available (somewhat similar what HD-Simulcast does, but that has to be supported)			

History

The priority can be already set in the services grid in range -10 - 10 .

#2 - 2015-11-19 08:58 - B C

Nina, the tag is bound to the channel, not to the services, so this won't work but I understand your idea behind. Jaroslav maybe you could add an option to give services a default priority based on service type, so if service type = 25 set priority to 1, or a global option for services in a channel to use HD services first.

#3 - 2015-11-24 18:16 - Jaroslav Kysela

- Status changed from New to Rejected

The streaming profile can prefer HD or SD services. There's a switch in the streaming profile configuration. I'm closing this because everything is implemented in the current development tree.
