ssl verify peer settings missing in IPTV mux

2015-12-06 16:18 - B C

Status:	New	Start date:	2015-12-06
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	IPTV	Estimated time:	0.00 hour
Target version:	4.4		
Description			
while trying to add a https stream on a Raspberry PI running OE, I always get the following message			
<pre>httpc: 002B: SSL peer verification failed (xxx.xxx.net:443) X509 20</pre>			
in the case of automatic IPTV network, ssl verify peer is not ticked (but makes no difference if it is selected). I did not find an option to enable/disable ssl peer verify on a manual IPTV network			

History

This option affects only fetching of the automatic network m3u not the [https:// mux](https://mux) urls..

#2 - 2015-12-06 21:13 - B C

ok, I misunderstood this option, can this be changed to a feature request to ignore the cert on the stream?

#3 - 2015-12-07 08:47 - Jaroslav Kysela

- Tracker changed from Bug to Feature

- Subject changed from ssl verify peer missing on manual IPTV, always checked on auto IPTV network to ssl verify peer settings missing in IPTV mux
