

Tvheadend - Feature #3392

Allow on-the-fly transcoding for recordings

2015-12-06 19:56 - Marco Jakobs

Status:	New	Start date:	2015-12-06
Priority:	Normal	Due date:	
Assignee:	John Törnblom	% Done:	0%
Category:	Transcoding	Estimated time:	0.00 hour
Target version:	999		

Description

I've created different user profiles for home use and "on the road" use. The traveling profile transcodes the stream down to a cap of 2Mbit/s so it works on most hotel connections.

Live TV works like a charm, but TVH ignores the user stream profile when DVR recordings are watched - trying to stream HD content with >10MBit/s via WAN and making it unusable.

History

#1 - 2015-12-06 20:41 - Jaroslav Kysela

- Tracker changed from Bug to Feature

- Subject changed from User stream profile missed for playback of recordings to Allow on-the-fly transcoding for recordings

It's feature request not a bug. This functionality (parsing back the recordings) is not in the code yet. You may save the recorded contents and then play it back when it's fully downloaded through WAN or you may create recordings with the transcoding profile.
