Description			
Hi, I would love to be able to add some rules for filter/autorec such as : "Record every movie with a note of 100/100" It would allow me to always have my hard disk full of good movies :-) Currently, I do that manually every week. Adding a filter on the "Note column" would allow that. Thank you very much

Hello,
I have done that using the Python HTSP interface. The following program records every program rated 60% or more, or every program of 1 hour or more which is rated >0%.

```
import htsp
import log
client = htsp.HTSPClient(('192.168.0.2', 9982))
client.getEvents()
events = client.recv()['events']
for event in events:
    duration = event["stop"] - event["start"]
    rating = event.get("starRating")
    if rating >= 60 or (duration >= 3600 and rating):
        log.info("Recording " + event["title"])
        log.info(event, pretty=True)
        client.addDvrEntry({"eventId":event["eventId"]})
```
