

## Tvheadend - Bug #3504

### Synology/xpenology an HP N54L Timeshift error

2016-01-18 20:04 - spyer spyer

<b>Status:</b>	Invalid	<b>Start date:</b>	2016-01-18
<b>Priority:</b>	Normal	<b>Due date:</b>	
<b>Assignee:</b>	Adam Sutton	<b>% Done:</b>	0%
<b>Category:</b>	Timeshift	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>		<b>Affected Versions:</b>	
<b>Found in version:</b>	Tvheadend 4.0-gitffc3ff1cb1		
<b>Description</b>			
Hello people,			
i have some problems with my TVheadend and timeshift.			
If i try to stop my stream with VLC, and play it again, the Stream will be freez.			
What can i do?

- Status changed from New to Invalid

You do not use timeshift. Pause in VLC HTTP live streaming causes that the internal buffers in tvh will overflow and data will be lost.

Use kodi and pvr.hts .

#### #2 - 2016-01-18 23:48 - spyer spyer

Why do I then enter the location for TimeShift in tvh?

I have more then a TB free disk space and 5 gb free Ram.

But I would to try Kodi.

Thx

The timeshift buffer is HTSP only it isn't used for HTTP streaming.

Okay. I find this tutorial for VLC with the HTSP-plug-in.  
Its work fine. I can use timeshift with Kodi and VLC.

You can close the ticket.  
THX

BTW: The link to the tutorial: <https://www.tvheadend.org/boards/4/topics/8509>  
Although the tut is two years old, but its work with VLC 2.2.1

smile.pngForgot to mention that there is an old htsp plugin for vlc, I'm surprised it still works with newer vlc versions!

You can close the ticket.

perexg has already closed it by setting as invalid :).
