Description			
<p>Hi, the idea is to highlight upcoming recording plans having time collisions in the dvr tab.</p> <p>A recording is highlighted, if the number of adapters that could possibly record during that time is not sufficient. And in case of satellite adapters it must be checked, whether the planned recordings come from different muxes.</p> <p>The plans that are going to be executed (time or priority based) are colored green and the others in red. If not realised with colors, it could be solved with a message e.g. "skipped due time collision" in the column "rerun of". As a consequence "rerun of" must be renamed somehow.</p> <p>Thanks!</p> <p>MW</p>
