#### Description

Since Tvheadend version 4.1-1942~g4244439 (or maybe more?) EIT EPG seems not to be auto-scanning the muxes anymore for EPG updates as it did before.

I have about 5 channels without EPG data (most channels use xmltv), but if I tune to one of these "empty" channels then the EPG data is loaded. So it seems that TVH does not auto-tune for EIT EPG updates.

In fact I don't see anymore epggrabber in the status->subscriptions tab, and I don't see anymore tuning for EPG grabbing in TVH log like the following (from version 4.1-1931~gc3eefc6):

```

```

Do I miss a new config feature that I have to enable, or is this a bug introduced in one of the latest releases?

With 4.1-1931~gc3eefc6 I did not notice anything strange, EPG was loaded as usual.
