Target version:	999		
Description			
Fairly new (6 months) to TVheadend (4.1.1721) but very happy user. Thx everybody who's developing and helping. smile.png			
I see very many subject related messages all over the internet old as well recent. Seems this is partly unclearness but also room for functional improvement. Humbly I state here my feature request to make this more user friendly. See: Configuration => DBV inputs => Networks => Edit Network:			
<ol style="list-style-type: none">1. Change label for "EIT time offset" to "local time zone" and add city names to the list to choose from.2. Add a checkbox to apply Summer time offset. Add mandatory boxes to let the user enter start date and end date for this. Alternatively, a time table from for example timeanddate.com could be used.3. Add infobox to inform that changes in EPG will be visible depending on cron job settings in "Configuration => Channel/EPG => EPG Grabber" and may take up to 24 hours before visible in EPG.4. Add infobox as information for following item below to alert user on per EPG settings.5. Add an checkbox/radio per EPG to use UTC or local time zone setting in "Configuration => Channel/EPG => EPG Grabber Modules => Settings".6. Add infobox to compliment the above.			

History

Edited to make things more clearly.

See: Configuration => DBV inputs => Networks => Edit Network:

Change label for "EIT time offset" to "local time zone" and add city names to the list to choose from.

1. Add a checkbox to apply Summer time offset. If checked, show mandatory boxes to let the user enter start date and end date for the summertime period. Alternatively, a time table from for example timeanddate.com could be used.
2. Add infobox to inform that changes in EPG will be visible depending on cron job settings in "Configuration => Channel/EPG => EPG Grabber" and may take up to 24 hours before visible in EPG.
3. Add infobox as information to alert user on per EPG settings.

See: Configuration => Channel/EPG => EPG Grabber Modules => Settings:

1. Add a checkbox/radio per EPG to use UTC or local time zone setting
2. Add infobox to compliment the above.
