<b>Description</b>			
Hi,			
i would like to manage my auto-iptv networks with bouquets and auto-mapping channel numbers.			
To use this, a read-only field inside the muxes tab for iptv muxes (= each stream url) with the position of a mux in a m3u playlist would be great:			
M3U:			
<pre>#EXTM3U EXTINF:-1,Channel 1 http://host/stream/channelid/1 #EXTINF:-1,Channel 2 http://host/stream/channelid/2 ...</pre>			
Muxes-Tab:			
<ul style="list-style-type: none"><li>• Channel 1, url=http://host/stream/channelid/1, Network-Position=1</li><li>• Channel 2, url=http://host/stream/channelid/2, Network-Position=2</li><li>• ...</li></ul>			
If we got this, i would like to use the bouquet Auto-Map to channels option with the Channel number offset option to set the new channel number.			
That would be great.			

### History

#### #1 - 2016-06-14 20:51 - C K

Example for channel number:

- Bouquet: Auto-Map to channels option on, Channel number offset 10000

The mux with network-position 1 -> 10001

The mux with network-position 2 -> 10002

and so on
