Description			
Hello,			
if the backend changes his public IP and transmit the new IP to DynDNS, have the frontend some problems with connection. The frontend "keep" the connection in "Status", but bandwidth is =0 and they not reconnect to the backend. Is it possible to implemente a statement like: "If bandwidth=0 then reconnect this channel" or or another solution?			
Info: "Maximum timeout" in Networks or "Automatic checking" in Services, have no influence in my case of issue.

add:

the same problem exists also when the backend is restarts.
