<b>Target version:</b>	4.2		
<b>Description</b>			
<p>I am trying to use IPTV service, which use html basic authorization method for login. But logins are email addresses. In VLC (or even the browser) I can use %40 substitute for @ character. Example:</p> <p><a href="http://some%40email.com@provider.com/playlist">http://some%40email.com@provider.com/playlist</a></p> <p>This syntax is correctly translated by browser or VLC and in packet capture I can see in credentials <a href="mailto:some@email.com">some@email.com</a>.</p> <p>But when I do the same in tvheadend, in capture credentials are not changed and some%40email.com is send for the authorization. Which is of course not working.</p> <p>Is it possible to be corrected?</p> <p>I am not attaching captures, because it contains valid usernames and passwords, I hope explain is clear enough.</p>			

### History

#### #1 - 2016-12-28 19:43 - Jaroslav Kysela

- Status changed from New to Fixed
- % Done changed from 0 to 100

Applied in changeset commit:tvheadend|97629167883cfa9ab24c59c3aa9a28a5e6bddd18.

#### #2 - 2016-12-28 19:43 - Jaroslav Kysela

- Status changed from Fixed to New
- % Done changed from 100 to 0

Fixed in v4.1-2400-g9762916 .

#### #3 - 2016-12-28 19:43 - Jaroslav Kysela

- Status changed from New to Fixed
- Target version set to 4.2
