

Tvheadend - Feature #4147

Correct html basic authorization

2016-12-27 02:06 - Jiří Rotter

Status:	Fixed	Start date:	2016-12-27
Priority:	Normal	Due date:	
Assignee:		% Done:	100%
Category:	IPTV	Estimated time:	0.00 hour
Target version:	4.2		
Description			
<p>I am trying to use IPTV service, which use html basic authorization method for login. But logins are email addresses. In VLC (or even the browser) I can use %40 substitute for @ character. Example:</p> <p>http://some%40email.com@provider.com/playlist</p> <p>This syntax is correctly translated by browser or VLC and in packet capture I can see in credentials some@email.com.</p> <p>But when I do the same in tvheadend, in capture credentials are not changed and some%40email.com is send for the authorization. Which is of course not working.</p> <p>Is it possible to be corrected?</p> <p>I am not attaching captures, because it contains valid usernames and passwords, I hope explain is clear enough.</p>
