Description			
Hi,			
I feel will be useful to configure fixed values for BOOTID, CONFIGID & DEVICEID.			
I have one OctopusNET and with this device is possible to "configure" these values. Also, some software SAT>IP servers (like minisatip) have this option.			
I know these values are dynamic and calculated when the server starts. This is the standard specification. However, I like to set these values by hand. Compare this option as a FIXED IP ADDRESS vs DHCP SERVER. It is very useful to have a DHCP server. However, in some scenarios a FIXED IP is a must have.			
Please, can you include support for manual configuration of these values?			
Thank you!
