Description			
Hi,			
I suggest to add in the Web UI, in the section "Connections", some info about the use of the RTP/AVP/TCP (aka RTP_over_TCP). I can't distinguish which clients are using this transmission mode.			
Futhermore, in the section "Stream" could be useful if for the connections to the SAT>IP servers it's as well indicated the use of the RTP/AVP/TCP transport.			
You found it interesting?
