Description			
Hi,			
After last changes, when the SAT>IP client connection fails (in my tests using RTSP_over_TCP, but I suspect this isn't related to the transport method), the TVH never connects to the SAT>IP server and the LOGs shows this forever:

```
mux "11993H in Astra192"

mux "11993H in Astra192"
```

Only if I make a change in the program the connection is reestablished.

I feel the SAT>IP client code needs to be fixed, as now it never reconnects.
