<b>Category:</b>		<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>		<b>Affected Versions:</b>	
<b>Found in version:</b>	4.2.3-20~g407c8a3		
<b>Description</b>			
I have m3u playlist like			
#EXTM3U			
#EXTINF:1,channel-1			
<a href="https://url1.too.long/over/512/characters">https://url1.too.long/over/512/characters</a>			
#EXTINF:2,channel-2			
<a href="https://url2.too.long/over/512/characters">https://url2.too.long/over/512/characters</a>			
#EXTINF:3,channel-3			
<a href="https://url3.too.long/over/512/characters">https://url3.too.long/over/512/characters</a>			
I created IPTV auto network and use that m3u playlist.			
Scan results in muxes tab are fail. And url in mux has only 511 characters.			

### History

Yes, there's 512-byte limit inside tvh. Who uses these so long URLs?

There are some sites who serve realtime tv streaming and vods in my country, South Korea. One of them uses url that includes encrypted login information. Its length is over 650 bytes.
