| Target version: | | | |
| Description | | | |
| Hi, | | | |
| Tvheadend supports launching an executable/script when a record finishes: https://tvheadend.org/projects/tvheadend/wiki/Tvheadend_post_recording_scripts | | | |
| The post recording hook has the ability to pass information about the recorded file to the executable/script called by the hook. | | | |
| Could you please consider also passing the following information to the executable/script: | | | |
| <ul style="list-style-type: none">- The number of errors occurred during the recording, which can be useful when postprocessing the recorded file.- The season information, which can for example be useful if the user uses the post recording hook to create an .nfo file- The episode information, also for example for the .nfo file. | | | |
| Cheers | | | |

History

Passing the subtitle might also be useful to people.

#2 - 2017-09-17 00:16 - Jaroslav Kysela

- Status changed from New to Rejected

See the build-in help. All proposed things are already implemented. The wiki page is just outdated.

#3 - 2017-09-17 15:16 - Ludi K.

Thanks for pointing me to the build-in help and sorry for the inconvenience.
