

Tvheadend - Bug #466

Freeze of decrypted stream after first frame using 'watch tv'

2011-04-20 13:06 - Eppo van Straten

Status:	Rejected	Start date:	2011-04-20
Priority:	Normal	Due date:	
Assignee:	Eppo van Straten	% Done:	0%
Category:	User Interface	Estimated time:	0.00 hour
Target version:	2.13	Affected Versions:	
Found in version:	unknown		
Description			
Using the watch tv button i can see freeview channels no problem. But when i start a subscription channel something goes wrong. The key is retrieved from my newcamd server (takes beteen 300 and 1000 miliseconds) and the very first frame id displayed. But then the stream freezes. There is no error message. Does this sound familiar? Need system log messages?			

History

#1 - 2011-05-04 19:00 - Andreas Smas

- Category set to 11
- Status changed from New to Need feedback
- Assignee set to Eppo van Straten
- Target version set to 2.13

What client are you using?

Log output would be nice yes.
