Description			
Hi,			
Suddenly I haven't got any indication of SNT/signal, it's always set to 0.			
Using latest build, but the issue appeared a few builds ago.			
I'm using tvheadend with an Inverto Multibox with latest build of Jaroslav satip-axe firmware. I don't know if its an issue with tvheadend nor satip-axe (switched from minisatip5 to minisatip7 this summer).			
Can anyone point me any directions?			
Thanks

After a month of use my Digibit with "Jaroslav satip-axe firmware" it stop working. Signal and SNR shows at 0% and I have to reboot digibit to get it working again. I dont know if this is your problem... :!

- Status changed from New to Rejected

Yes, it appears like minisatip or driver bug. I noticed it, too. It's not easy to debug this, because it takes awhile to see it. Create a new issue for satip-axe: <https://github.com/perexg/satip-axe/issues>

It appears like a minisatip issue - if you kill the minisatip task, it will be respawned and the signal is back.

OK gonna try, in my case its only a signal/SNR not showing issue, streaming always works fine.

#5 - 2017-10-30 15:05 - Alex Platero

BTW sorry Jaroslav for hijacking this section with a satip-axe bug, but knowing that you develop both sources I thought you wouldn't mind.

Thanks.
