Target version:	4.6		
Description			
Hi all,			
i've lost a number of dvr-log-files over the years (newer Kodi's had different default-life-times, bugs, my stupidity etc), it would be great if you could add a simple generator to (re-) import old recordings; that would also help "refugees" from other, (inferior) pvr-solutions ;).			
Obviously, tvh cant do magic and guess all the information, but with some format string it could import the very basic parameters, or just generate an entry and let the user edit it...			
It would be fantastic, if tvh can do this on it's own (click import in the gui, it would crawl the configured recordings-directory and generate an entry for every un-associated file), but for my purpose a shell-script would be enough...			
Regards,			
/hp
