

Tvheadend - Bug #4896

Memory Leak (?) when recording Sat>IP feed

2018-01-27 14:27 - David Pollard

Status:	New	Start date:	2018-01-27
Priority:	Normal	Due date:	
Assignee:	Jaroslav Kysela	% Done:	0%
Category:	SAT>IP	Estimated time:	0.00 hour
Target version:		Affected Versions:	
Found in version:	4.3-1006~gd381d71e3		
Description			
<p>I reported this (https://tvheadend.org/issues/4867) and thought the memory leak was gone when I tried an interim version (can't recall version, sorry), but on the latest version (4.3-1006~gd381d71e3), the problem is back.</p> <p>The memory increase rate is roughly inline with the amount of data being received from Sat>IP.</p> <p>I run TVHeadEnd under Docker in cast that's relevant on a Synology DS918+ (16GB ram).</p> <p>Linuxserver.io, who provide the docker image, update weekly, so I'll test again next week and report back. If you want me to do any troubleshooting (any debug switches etc...), then please let me know what you need.</p> <p>Thanks chaps</p> <p>dp</p>

Could you verify, if the memory is malloc()ated ? <https://stackoverflow.com/questions/2564752/examining-c-c-heap-memory-statistics-in-gdb>

#2 - 2018-01-29 09:46 - David Pollard

I've reported this (also) in the Docker Image issues queue, as I'm not sure if the tools to perform what you're asking are included in the image.

Will report back in due course....

Thanks Jaroslav !
