

Tvheadend - Feature #5148

Add the ability to enter a web url to pull in the xml guide data - like Plex, Emby and DVBLink does, or add a built in webget so you just key in the url location (like others)

Description			
<p>Coming from emby, plex and DVBLink, they have none of the xml grabber stuff. I found this massively confusing, specially as my grabber was not in the TVHeadend docker I was using for unraid - forcing me to use the FTA guide data.</p> <p>It would be great if I could just enter a URL to get the guide data, Mine is provided by IceTV.</p> <p>For example, on Plex, Emby and DVBLogic, I just enter a url provided by IceTV and the guide is automatically there, the PVR software then updates that daily.</p> <p>All I have to do to get the URL for plex/emby/DVBLink is go to https://www.icetv.com.au/xmltv and login with my details.</p> <p>This is an example of the plex url (api key and token changed to XXXXXXXXXX) : https%3a%2f%2fapi.icetv.com.au%2fshows.xmltv%3fapi_key%xxxxxxx%26application_version%3d1%26email_address%3dvaisew%40gmail.com%26token%xxxxxxx</p> <p>This is an example of the emby and DVBLogic url (also provided by IceTV) : https://api.icetv.com.au/shows.xmltv?api_key=xxxxxxx&application_version=1&email_address=vaisew@gmail.com&token=xxxxxxx</p> <p>MediaPortal also uses a similar method as I believe they have a built in 'webget' process - so if tvheadend has the same built in webget process where you can just fill in the below, then that would also be good : http://www.icetv.com.au/cgi-bin/epg2/iceguide.cgi?op=xmlguide&desc_length=0&user=xxx&pass=yyy</p>
