| Description | | | |
| Hello, | | | |
| is it possible to add a field in the information dialogue, showing the name of the source the actual EPG-data has been got from? E.g. 'tv_grab_eu_epgdata' or 'OTA-EIT'. | | | |
| I have recorded third episodes of a tv-serie. The description of the first two episodes contains the title and the episode number. Whereas the third episode contains the title and the summary, but not the episode number. | | | |
| Now I would like to know in a quick way which of the descriptions descends from which epg source (although it's also possible that all three descriptions in fact have their origin from just one source). | | | |
