Target version:			
Description			
<p>I would like so see tvheadend to allow streaming without descramble.</p> <p>First because some providers don't work well with dvbapi, newcamd, even if i set constant CW.</p> <p>Second because without use own tvheadend descrambling my tvheadend is up running for 3 days and no "too much queue data" (i know @Jaroslav is fixing it on the last commits also).</p> <p>@Jaroslav already told me that i can "use the direct service streaming URL (from the service grid) and add 'descramble=0' http argument for the http streaming; tvh should send unmodified scrambled stream with this" however if it's not to hard have the habilitie to grab playlist with channels (scrambled as option) will be awesome because that way we could use the magnific, tuner control, priorities and so on that tvheadend do so good!</p> <p>Thanks</p>

What clients descramble the contents?

#2 - 2018-12-13 19:33 - Ricardo Rocha

I passed links to a trial of cesbo (astra) and using exactly same N line if works just fine.
