Description

Hi, now web interface is OK but very very tired is map all channels what we want, one by one .. we need maaaaaaany time smile.png

So nice will be add possibility automap services but over some option

- map over Network name (example we choose CYFRA+, + DVB default character and click one button, and all channels with this network name will be automat)

- map over CAID/IDENT - some provider have channels on TP from other network name, so other way for recognize channel from this provider is map over CAID/IDENT - example CYFRA+ have 0100/0000068 so if HTS in channel properties find this CAID/IDENT then automatical map etc.
