Description			
Hi,			
I'm using fastscan bouquets and sometimes channels disappear and reappear after sometime, or sometimes there are duplicate channels. Tvheadend will always recover from this after some hours. I guess that this is related to channel listing updates by my provider.			
What I want to archive is a simple "search for channels/updates" with a simple button click, this is implemented in most dvb receivers out there.			
Yes there is a "force scan" in the bouquets tab, but that doesn't prevent updates when not pressing the button.			
Detaching channels from the bouquet will result in duplicates as the bouquet is still enabled. So to update my channel list without auto updating, I need to do:			
1) remove all channels from the bouquet manually			
2) enable the bouquet			
3) press 'force scan'			
4) channels are added again			
5) detach all channels again and disable the bouquet			
Maybe I'm making this too complicated by myself?			
A "don't automatically update bouquet" option will be very helpful here :-)
