Description			
Hi All			
Thanks for the great work. I hope this could be relatively straightforward to implement.			
Is it possible to add an option to export the Program/Episode Icons to the XMLTV EPG output?			
I am using a TVheadend server with an android TV client which can make use of these images. Currently the XMLTV grabber imports them into the TVH server but they are stripped out before TVH exports the XML.			
Is it possible to make this an option? I note that it would not be desirable to for everyone given the limited memory on some clients but for those who can use them it is frustrating to have them in the server and not be able to pull them out.			
Thanks!
