Description			
Hi,			
I simulate an AirPlay audio player with https://github.com/mikebrady/shairport-sync on a Debian computer.			
I can choose this audio output from my MacBook or my Apple TV. Sound is great without any delay except when I watch a Live TV channel from TVH.			
In this case there is an inline audio stutters and it's impossible to correctly watch a live TV channel.			
With VLC video is Ok but sound is stutter.			
With Kodi (MacBook or Apple TV) video AND audio stutter.			
I can confirm that this issue does not appear on Kodi when I watch a local movie.			
Just tell me if you need more information, also I can perform tests by installing another version of TVHeadend			
Thank you!			
Tests done on:			
<ul style="list-style-type: none">• Apple TV with Kodi 17.6 and official TVHeadend PVR• MacBook Pro with Kodi 17.6 and official TVHeadend PVR• MacBook Pro with VLC and M3U file			
BTW: I use an HDHomeRun with two tunners DVB-T (France TNT channels)
