<b>Description</b>	
Hello,	
I have got issues with using more than 2 HD channels in h265. 1 channel works perfectly but when i try 2 at the same time it starts blocking in VLC and the transcoder has a lot of capacity.	
Also i have tried to transcode 1 HD channel and 5x SD channels works good, then added 1 HD channels more and the HD channels started blocking but SD worked normally.	
I have tried to transcode more HD channels combined with SD channels in h264 and the work without any problems but only in h265 isnot working well.	
Could you help me to adjust profile for h265?	
I am using:	
CPU AMD Ryzen 9, 3.5 Ghz	
RAM 4x 8GB	
Mainboard ASRock X570 Pro4	
GPU: NO	

#### History

##### #1 - 2021-04-26 11:12 - Daniel Lombardo

I forgot to mention its running over Ubuntu 18.04.2 LTS

##### #2 - 2021-04-26 11:26 - Fiore Systems

- Tracker changed from Feature to Bug
- Status changed from New to Invalid
- Found in version set to 4.3-1952

That is perfectly normal. You are most likely using software based transcoding which is generally slow.

Questions like this should be asked on the Forum.
