

Tvheadend - Bug #6111

Deleted timers come right back within a minute or two

2021-12-19 20:08 - K Shea

Status:	New	Start date:	2021-12-19
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	PVR / DVR	Estimated time:	0.00 hour
Target version:		Affected Versions:	
Found in version:	HTS Tvheadend 4.3-1986~g09a2c71ab		
Description			
<p>Using version HTS Tvheadend 4.3-1986~g09a2c71ab under Ubuntu server 20.04, if you go to the Upcoming/Current Recordings tab and delete a timer and click the delete button, it goes away momentarily but then comes right back. Every time it restores it prints a line in the syslog that looks something like this:</p> <pre>Dec 19 13:52:08 machinename tvheadend³³²⁵⁵⁶: dvr: entry 788b532f99c7b933d5513db15cca7c80 "Program Name" on "Channel Name" starting at 2021-12-24 21:58:30, with broadcast id "ddprogid:///usr/bin/tv_grab_file/EP01158129.028></pre> <p>This never happened when we were running HTS Tvheadend 4.2.8-36~g5bdcfd8ac but since upgrading to the new version this happens ever time we try to delete a timer. The timer is set up as an Autorec but sometimes there are weeks where the show is a rerun or for some other reason we don't want to record it, and we don't want to have to disable the Autorec and then have to remember to re-enable it after that one show has aired. Can you please fix this so that when we delete a timer it actually stays deleted? Thank you.</p>

Simply disable the recording instead of deleting it.

Other than that: Unless you figure out where the issue was introduced exactly (which commit causes it) this probably won't be looked at by anybody.
