<b>Description</b>			
<p>Could we have a way to figure out which muxes actually carry the EPG data please? Perhaps under "EPG Grabber Channels" could we get a column that shows us which mux or muxes the data came from? We could then use this to disable scanning for EPG data on redundant muxes... A huge deal for us with motorised dishes. Maybe it could be auto?</p> <p>Cheers, Chris</p>
