| Description | | | |
| <p>I noticed I don't have the option to disable "fast input switch" when using the internal Tvheadend SAT>IP server. Other SAT>IP servers do have this option in the adapter settings. Is it possible to add this feature in case it's needed? (avoiding transport/continuity errors when using certain tuners)</p> <p>Full mux RX mode is supported for TvH SAT>IP server, but maybe it's better to change name "Restrict pids=all" to "Full mux RX mode"?</p> | | | |

Fast input switch is an option to keep the socket open when switching channels. That option doesn't make sense for a server.
